

2010 AT A GLANCE

This Beautiful lakefront home had an inferior screen enclosure patio design which trapped leaves and water on the aluminum lanai roof adjacent to home structural wood beam which led to rotting. Pro Home and Business removed and redesigned the pool enclosure/lanai, removed the rotting beam and replaced and configured a new patio with a structural insulated roof with built in wiring channels for paddle fan/light kits and surround sound system. We thoughtfully eliminated the problem of leaves accumulating on the flat roof by protecting it with a complete screen covering and solved the problem that caused this home to leak.
